Education

Bachelor of Science in Computer Science – University of Memphis, Memphis, TN

Graduated: May 2026
Relevant Coursework: Data Structures, Algorithms, Databases, Machine Learning

Skills & Tools

Languages: Python, SQL
Certifications: AWS Certified Cloud Practitioner, Google Data Analytics
Tools: Git, Avaya Site Administration (ASA), VS Code, Zoom Admin, NICE On-Prem, NICE QM, CM Configurations, ServiceNow, Verizon Contact Center, Warehouse Management Systems (WMS), Ticketing Systems

Experience

Comm Services Shift Lead – UMRF Ventures, Memphis, TN

Aug 2025 – Present

- As Shift Lead overseeing enterprise-wide communication infrastructure, directed daily operations across NICE On-Prem, Avaya Aura, Verizon Contact Center (ACD), and Zoom, implementing proactive monitoring and response protocols that improved system uptime and reduced incident escalations.
- When complex telephony and contact center outages arose, partnered cross-functionally with IT, security, and vendor teams to diagnose and resolve issues using NICE QM, NICE Engage, and Avaya Site Administration (ASA), minimizing downtime and maintaining service-level commitments.
- Identified gaps in CM configurations and escalation workflows, redesigned routing logic and escalation paths, resulting in measurably reduced average resolution time and improved overall operational efficiency.
- Tasked with improving incident visibility across the team, leveraged ServiceNow to log, categorize, and manage service requests end-to-end, ensuring full ITSM workflow adherence and faster ticket resolution across all shifts.

Vendor Risk Security Analyst – UMRF Ventures, Memphis, TN

Apr 2025 – Jul 2025

- Tasked with evaluating third-party vendor security posture, conducted structured risk and compliance assessments against organizational standards, identifying gaps and producing actionable risk ratings to inform vendor selection and oversight decisions.
- To mitigate third-party exposure, scrutinized vendor documentation, access controls, and security practices, surfacing critical vulnerabilities and collaborating with internal stakeholders to drive timely risk mitigation.
- Responsible for audit readiness, systematically documented assessment findings and tracked vendor remediation progress in ticketing systems, strengthening governance processes and reducing audit preparation time.

Systems Analyst Intern – DHL Supply Chain, Memphis, TN

May 2024 – Aug 2024

- Assigned to improve reporting accuracy for warehouse operations, queried and analyzed large operational datasets using SQL and Microsoft SQL Server, delivering insights that directly supported system performance analysis and data-driven planning decisions.
- Facing recurring WMS bottlenecks impacting warehouse throughput, investigated system workflows and operational data to pinpoint root-cause inefficiencies, then recommended targeted process and system improvements adopted by the operations team.
- Tasked with communicating complex technical findings to non-technical leadership, built polished stakeholder presentations in Microsoft PowerPoint that translated data insights and trends into clear, decision-ready reporting.

Projects

Tiger Syndicate — Full-Stack Ruby on Rails Marketplace

- Identifying a gap in peer-to-peer commerce tools for the University of Memphis community, designed and built a full-stack Ruby on Rails marketplace enabling students to securely buy, sell, and offer services within a role-based environment.
- To ensure platform security and data integrity, implemented authentication and authorization flows using Devise and OAuth, enforced real-world business rules, and maintained a reliable PostgreSQL database backend.
- Responsible for delivering a production-ready application, built and validated end-to-end features using RSpec, crafted responsive UI components with Bootstrap, and shipped a fully deployment-ready system from requirements gathering through launch.

Technologies: Ruby on Rails, PostgreSQL, RSpec, Devise, OAuth, Bootstrap, MVC Architecture, Full-Stack Development

Tower Overhaul Project — Systems Analysis Initiative

- Faced with critical inefficiencies in inventory storage and tower management that were degrading operational performance, spearheaded a cross-functional systems analysis initiative to diagnose root causes and develop a remediation strategy.
- Executed comprehensive data and workflow analysis across affected systems, producing a detailed report that mapped root causes, quantified operational risks, and outlined the full financial impact of existing inefficiencies.
- Delivered findings and data-backed recommendations directly to senior leadership, securing executive buy-in on a process overhaul projected to yield cost savings exceeding **\$10 million** through targeted inventory restructuring and process optimization.

Skills & Tools: Systems Analysis, Data Analysis, Inventory Management, Operational Reporting, Stakeholder Presentations
